RE: Results of Fourth Quarter 2023 Water Authority Data Gap Well Monitoring (revised May 1, 2024)

Dear Kelsey:

John Shomaker & Associates, Inc. (JSOI) was contracted by the Albuquerque Bernalillo County Water Utility Authority (Water Authority) to assist with Data Gap Well Monitoring at well WUABFFMW-01 for four quarters beginning with the 3rd Quarter (Q3) 2023 event. The results herein are for the sampling event conducted during the 4th Quarter (Q4) 2023. The sampling event began on November 27, 2023 when the passive sampling devices were deployed. The sampling event concluded on December 18, 2023 when the passive sampling devices were retrieved and the passive samples collected and active sampling took place.

On November 27, 2023, JSOI removed the pressure transducer, measured depth to water, and then deployed 4 dual membrane passive diffusion bags (DMPDB) and one passive diffusion bag (PDB) in WUABFFMW-01. The passive sampling devices were retrieved and samples were collected for laboratory analysis on December 18, 2023, once the passive sampling devices had been deployed in the well for at least three weeks, per manufacturer's recommendations. Following retrieval of the passive sampling devices, the Water Authority owned Bennett sample pump was deployed for active sampling. The well was pumped at a rate of about 0.75 gpm until three well volumes had been purged. Samples were then collected for laboratory analysis for the analytes and methods presented in Table 1. Deployed depths of the passive sampling devices and the setting of the Bennett sample pump are presented in Table 2. Laboratory analytical results, chains-of-custody, and field documents including purge logs are attached.

Samples were delivered to Eurofins Albuquerque (formerly Hall Environmental Analytical Laboratory) and shipped overnight to Eurofins Environment Testing (Eurofins) in Denver, CO for analytical analyses. Table 3 is a summary of analytes that were detected during the 4th quarter 2023 sampling. None of the detected analytes were reported above the New Mexico Environmental Department Drinking Water Bureau (NMED-DWB) standards aside from manganese. Manganese falls under the secondary drinking water standards, which are non-enforceable standards related to aesthetics. There is not a standard for benzaldehyde, which was detected in WUABFFMW-01 BP (Bennett Pump sample).

Bis(2-ethylhexyl) phthalate was detected in and reported as estimates for all of the samples submitted for laboratory analysis. According to Eurofins, the level in the method blank is consistent with common lab contamination and it is implied and likely that the results are lab contamination.

Compared to the sampling event in the 3rd quarter 2023 sampling event, Di-n-butyl-phthalate and Benzaldehyde concentrations in WUABFFMW-01 BP, were below the laboratory detection limits. The other analytes remained under laboratory detection limit, in the 4th quarter 2023 sampling event.

**pump intake

Prior to deploying and post-sampling, the Bennett pump was decontaminated by pumping 5 gallons each of a distilled water and Liquinox mix, distilled water, and lab-grade deionized water through the pump and tubing. After final field decontamination, post-purging and sampling of the well, a sample final rinse sample (Equip Rinsate) was collected and submitted for laboratory analysis. All decontamination water and industrial derived waste (IDW) water produced during purging was collected in a container provided by Advanced Environmental Solutions, Inc. (AES) and delivered to their facility for disposal. The disposal manifest is attached.

Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt

The samples were received on 12/20/2023 11:35 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.5°C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Method 8260D - Volatile Organic Compounds (GC/MS)

Samples Equip Rinsate (185943-3), WUABAFMW-01(BP) (185943-2) and WUABAFMW-01(PDB) (185943-1) were analyzed for Volatile Organic Compounds (GC/MS). The samples were analyzed on 12/28/2023.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-638514 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8270E - Semivolatile Organic Compounds (GC/MS)

Samples Equip Rinsate (185943-3), WUABAFMW-01(BP) (185943-2) and WUABAFMW-01(PDB) (185943-1) were analyzed for Semivolatile Organic Compounds (GC/MS). The samples were prepared on 12/22/2023 and analyzed on 12/28/2023 and 12/29/2023.

The following samples WUABAFMW-01(PDB) (280-185943-1), WUABAFMW-01(BP) (280-185943-2) and Equip Rinsate (280-185943-3) in preparation batch 280-638265 were decanted prior to preparation.

The continuing calibration verification (CCV) associated with batch 280-638558 recovered outside acceptance criteria, low biased, for Di-n-octyl phthalate and 4-Nitrophenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples did not contain the affected analyte(s) at a level greater than the RL, the data are reported.

The continuing calibration verification (CCV) associated with batch 280-638558 recovered outside acceptance criteria, low biased, for Bis(2-ethylhexyl) phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples did not contain the affected analyte(s) at a level greater than the LOD, the data are reported.

The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 280-638265 and analytical batch 280-638558 recovered outside control limits for the following analytes: 2,4-Dinitrophenol, Hexachlorocyclopentadiene, Hexachlorobutadiene and Hexachloroethane.

A refrigerator used for temporary storage of sample extracts for semi-volatile organic compound analysis had temperature excursions above the maximum acceptance level of 6°C. The temperatures recorded ranged from 6° to 10°C for a period of 11 hours between December 22nd to December 23rd 2023. Laboratory control samples recovered within standard control limits and surrogate recovery in samples was within acceptance limits. It is not expected that the temperature excursion impacted data quality. This applies to Method 8270E on the following samples: 280-185943-1, 280-185943-2, and 280-185943-3.

The laboratory control sample (LCS) associated with preparation batch 280-638265 and analytical batch 280-638621 recovered outside control limits for Hexachlorobutadiene. Samples are outside 2x holding time; data have been qualified and reported.

WUABAFMW-01(BP) (280-185943-2), Equip Rinsate (280-185943-3) and (LCS 280-638265/2-A)

The surrogate recovery 2-Fluorobiphenyl for the method blank associated with preparation batch 280-638265 and analytical batch 280-638621 was outside control limits. Surrogate recovery in laboratory control sample and associated samples are within control limits. Samples are outside 2x holding time; data has been qualified and reported.

Method 8011 - EDB, DBCP, and 1,2,3-TCP (GC)

Samples Equip Rinsate (185943-3), WUABAFMW-01(BP) (185943-2) and WUABAFMW-01(PDB) (185943-1) were analyzed for EDB, DBCP, and 1,2,3-TCP (GC). The samples were prepared and analyzed on 12/22/2023.

Surrogate 1,2-Dibromopropane in preparation batch 280-638238 and analytical batch 280-638307 was out of control high bias on the primary column. The conformation column was in control. Data has been reported from the in control column. WUABAFMW-01(PDB) (280-185943-1), WUABAFMW-01(BP) (280-185943-2), Equip Rinsate (280-185943-3), (CCV 280-638307/17), (CCV 280-638307/27), (CCV 280-638307/3), (LCS 280-638238/2-A), (LCSD 280-638238/3-A) and (MB 280-638238/1-A)

The continuing calibration verification (CCV) associated with batch 280-638307 recovered above the upper control limit for Ethylene Dibromide. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: WUABAFMW-01(PDB) (280-185943-1), WUABAFMW-01(BP) (280-185943-2) and Equip Rinsate (280-185943-3).

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-638238.
